### RESEARCH INTERESTS

The representation of conceptual information in the brain. Sensorimotor/embodied accounts of semantics. Conceptual dynamics, i.e., how context, whether the environment you are in, the activities you are multitasking or the idiosyncrasies of your previous experiences, affects how you think about objects. Parkinson's Disease and its impact on the representation of manipulable objects. L-dopa and impulse control disorders. Olfaction & vision in semantic memory. Interference/facilitation of conceptual retrieval/task performance during on-line multitask processing. Spatial language and deictic communication. Interactive alignment.
